

WETH Staking on Robinhood Chain

Full-stack staking dApp: smart contract + web app, built and proven on live testnet infrastructure.

Date: July 14, 2026 **Status:** Testnet verified · mainnet pending business inputs

Network: Robinhood Chain (Chain ID 4663)

Bottom line: the full system — smart contract and web app — is built and has been tested end-to-end on Robinhood Chain's real public testnet (not a local simulation). A user connected a wallet, staked WETH, earned rewards, and successfully claimed them, all verified on-chain. The only things blocking a mainnet launch are business inputs we don't control: the company's real reward token, a production RPC provider account, and a security audit.

What's built 5 of 5

Staking smart contract

DONE

Solidity, audited-pattern design (Synthetix-style reward distribution). Stake / withdraw / claim / exit, all reentrancy-protected.

Built-in safeguards

DONE

Reward pool can never promise more than it holds; owner cannot touch user funds; users can always withdraw, even if paused.

Web app

DONE

Connect wallet, view total staked (TVL) and personal balance, approve / stake / withdraw / claim with live status.

Robinhood Chain network config

DONE

Verified against official Robinhood Chain docs — correct chain IDs, RPC endpoints, and official WETH addresses for mainnet and testnet.

Deployment scripts

DONE

One-command deploy to local, testnet, or mainnet, plus reward-pool funding.

Proof it works on the real chain

Actions performed in order, against Robinhood Chain Testnet — a public network, not a local simulation. Every result below was independently re-checked on-chain.

- | | | |
|---|---|------------------|
| ✓ | Contract deployed to Robinhood Chain Testnet | live |
| ✓ | Reward pool funded | 700 RWD / 7 days |
| ✓ | Wallet approved and staked WETH | 0.001 WETH |
| ✓ | Rewards accrued automatically over time | confirmed |
| ✓ | Reward claimed — landed in wallet, re-verified on-chain | 0.41 tRWD |

What's still needed before mainnet 0 of 4

Company's real reward token

NEEDED

Testing used a placeholder token. Need the real internal reward token's contract address, or approval to deploy one.

Production RPC provider account

NEEDED

Robinhood Chain's public RPC is rate-limited. Alchemy is their recommended provider — a free account covers this.

Independent security audit

NEEDED

Contract logic is sound and tested, but real user funds warrant a professional audit before launch.

Mainnet gas funds + go-live decision

NEEDED

A funded deployer wallet and sign-off to deploy for real.
